### Firmenbeschreibung

The Institute of Signal Processing (ISP) focuses on the algorithmic-, architectural- and hardware-oriented aspects of signal processing systems. Application areas are information and communication systems, radio frequency and baseband integrated circuits, battery- and power management for mobile devices, sensor- and bio- signal processing. Our vision is to work on long term research projects as well as on short term topics, the latter in close cooperation with industry partners.

In teaching we are involved in the Bachelor and Master programs Information Electronics, Computer Science and Mechatronics, where we are committed to giving high quality lectures and lab courses.

We are located in the JKU Science Park in Linz, Austria, which provides an excellent working environment and a perfect atmosphere for creativity and development.
